

**AMENDMENTS TO THE SPECIFICATION** (37 CFR §1.121(b))

Please replace the paragraph at page 24 lines 20-25 as follows to correct an inconsistency with FIG. 7:

Upon opening the bottle, infra-red radiation is emitted. If the consumer has a mobile telephone ~~H~~ **111** with the facility to transmit and receive infrared signals and transfer data, it is possible to physically position the bottle 10 and the telephone ~~H~~ **111** for communication by infrared means. The consumer switches his telephone on, sets it to infra-red mode and directs it at the bottle, which if it is a "winning" bottle, will send a message 92 to the telephone letting the consumer know he has won a prize.

Please insert the following Abstract (taken from corresponding PCT publication WO 2004/110892) following the claims (such Abstract also being provided on a separate sheet accompanying this Preliminary Amendment, as per 37 CFR §1.72(b)):

A container (10), for example a drinks bottle, comprises means of producing an output such as a light signal (13) when the container is opened. Opening the container (10) causes switching of a detector circuit (20) included in the container (10), which in turn causes production of the output signal. Removing a cap (11) of the container (10) may directly close or open a switch (21, 22) within a detector circuit (20). Alternatively the switch (21, 22) may be activated by a change in pressure within the container, or by temperature. The output signal may cause illumination of the contents of the container (10) by an LED (13), or of a label (125) on the container (10), which may be constructed by an electroluminescent device (127) comprising a thin sheet of electroluminescent material.
